Description

RM 76 is a six-quarter grain land package located in southwest Saskatchewan, offering a highly cultivated land base in a productive farming region. The property totals 953.47 ISC title acres, with SAMA reporting 907 cultivated acres, 20 hay acres, and 27 acres classified as other land. The land is comprised of Fox Valley, Ardill, and Birsay soil associations with silt clay, clay loam, and loam soil textures, providing a diverse yet productive soil profile capable of supporting a wide range of cereal, oilseed, and pulse crop rotations. The package carries a 2025 SAMA weighted average Soil Final Rating of 56.42 points per acre and includes SCIC Soil Classes F, G, H, and J, reflecting moderate variability across the six quarters while offering a strong predominance of cultivated acres.

With approximately 95% of the SAMA acres in cultivation, this package represents an excellent opportunity for producers seeking to expand their grain farming operation with a contiguous and highly productive land base. The combination of strong cultivated acreage, diverse soil associations, and efficient field layout makes this an attractive acquisition in an established agricultural area. The property is available for the 2027 crop year, allowing the successful purchaser to incorporate the land into future farming operations with certainty.

Average per 160 acres 326,893

SAMA Information

This information is collected from Saskatchewan Assessment Management Agency via field sheets on each individual parcel. It includes specific information such as: assessed value, uses of soil (cultivated, arable, pasture, wetlands, etc), number of acres for each use, soil profile information including association & texture, topography, stones, salinity and soil final rating.

Soil Final Rating

The final rating (FR) is the productivity rating for the acres adjusted for economic factors that affect the average cost of production for specified features. The economic factors include stones, topography, natural hazards, man-made hazards, tree cover and miles to market. The final rating units are index points per acre. Soils are given a rating from 100 (best) to 0 (worst). Soils with a final rating under 30 are marginal and rarely cropped.

Saskatchewan Crop Insurance Corporation (SCIC)

SCIC gives a class rating to every quarter section in Saskatchewan to reflect its productivity. Ratings range from Class A (best) to Class P (worst). There are 23 different risk zones in Saskatchewan. Please note a class B rating in risk zone 3 does not necessarily have the same productive capacity as a class B rating in risk zone 16.
