A full quarter section southwest of Davidson, in the Rural Municipality of Willner #253. Canada Land Inventory mapping shows these as dominantly Class 3 and 4 Loam soils, within the Dark Brown soil zone. Overall soil final rating is 53.2 points per cultivated acre, with property tax assessment data showing 109 acres arable. Crop Insurance rates this as "K" soil. **This is available to farm in 2026.** Very good access via all-season gravel road.

SW-14-26-02-W3

159.25 title acres (ISC)

SAMA Information

109 arable acres

\$218,600 total 2025 assessed value (AV)

53.2 soil final rating (weighted average)

Average per 160 acres \$219,975

SAMA Information

This information is collected from Saskatchewan Assessment Management Agency via field sheets on each individual parcel. It includes specific information such as: assessed value, uses of soil (cultivated, arable, pasture, wetlands, etc), number of acres for each use, soil profile information including association & texture, topography, stones, salinity and soil final rating.

Soil Final Rating

The final rating (FR) is the productivity rating for the acres adjusted for economic factors that affect the average cost of production for specified features. The economic factors include stones, topography, natural hazards, man-made hazards, tree cover and miles to market. The final rating units are index points per acre. Soils are given a rating from 100 (best) to 0 (worst). Soils with a final rating under 30 are marginal and rarely cropped.

Saskatchewan Crop Insurance Corporation (SCIC)

SCIC gives a class rating to every quarter section in Saskatchewan to reflect its productivity. Ratings range from Class A (best) to Class P (worst). There are 23 different risk zones in Saskatchewan. Please note a class B rating in risk zone 3 does not necessarily have the same productive capacity as a class B rating in risk zone 16.
