Enterprise:	Grain		

Description

Farmland

Located in the Ponteix district of southwest Saskatchewan, roughly 85 km southeast of Swift Current, this package spans the Rural Municipalities of Auvergne No. 76, Pinto Creek No. 75, and Wise Creek No. 77, with the strong majority of the land base concentrated in the RM of Auvergne. The soils here are dominated by Ardill clay loam and Fox Valley silty clay and silty clay loam associations — heavier-textured soils with good moisture-holding capacity that are well suited to durum, spring wheat, lentils, peas, and canola production in this part of the province, with lighter Hatton, Chaplin, and Birsay soils making up a smaller portion of the package and supporting the hay and pasture acres. SCIC crop insurance class ratings range from F through M, with the majority of quarters rated G and H, and the land sits primarily in Risk Zone 3, with a handful of quarters in Risk Zone 6. According to current SAMA records, the package carries a weighted average soil final rating of 52.90 and an average of \$304,030 per 160 acres. In total, the offering includes 19,696.86 title acres with 16,306 cultivated acres, along with 2,167 hay acres and 802 pasture acres. Blocks of this size rarely come available in one offering — an opportunity for an established operation or investor to secure a substantial, workable land base in a proven grain-growing district in a single transaction.

Select the **Farmland** tab above for a complete list of legal land descriptions.

This property is one of 19 listings offered as part of the Monette Farms Ltd. portfolio — a once-in-a-generation opportunity to acquire prime Saskatchewan farmland across seven regions. Farmland of this calibre, in this quantity, rarely comes to market — and when it does, it doesn't remain available for long. Whether you're looking to add a single quarter or grow your enterprise with a significant land acquisition, parcels within this listing may be available for individual purchase.

If any of this land fits your plans, ***make a strong offer and make it early***. A compelling offer can be accepted ahead of the deadline — the right deal doesn't have to wait.

SAMA Information

This information is collected from Saskatchewan Assessment Management Agency via field sheets on each individual parcel. It includes specific information such as: assessed value, uses of soil (cultivated, arable, pasture, wetlands, etc), number of acres for each use, soil profile information including association & texture, topography, stones, salinity and soil final rating.

Soil Final Rating

The final rating (FR) is the productivity rating for the acres adjusted for economic factors that affect the average cost of production for specified features. The economic factors include stones, topography, natural hazards, man-made hazards, tree cover and miles to market. The final rating units are index points per acre. Soils are given a rating from 100 (best) to 0 (worst). Soils with a final rating under 30 are marginal and rarely cropped.

Saskatchewan Crop Insurance Corporation (SCIC)

SCIC gives a class rating to every quarter section in Saskatchewan to reflect its productivity. Ratings range from Class A (best) to Class P (worst). There are 23 different risk zones in Saskatchewan. Please note a class B rating in risk zone 3 does not necessarily have the same productive capacity as a class B rating in risk zone 16.
